

# Maritime Weather Monitoring Systems Specialists

We specialise in weather stations and sensors for harsh marine environments.

Our team offers more than 30 years' experience from the offshore and maritime sector. We understand the complexities of maritime operations and know how to ensure reliable and accurate measurements in extreme conditions.

We both design, install, test, service and maintain weather observation systems. Hence, we can take full ownership of your solution and are always ready to mobilise our certified service engineers upon request.

## **Key benefits:**

- 30 years' offshore experience
- Certified service partner
- System integration specialists
- 24/7 technical support

OFFSHORE TELECOM  
SERVICES

# Integrated Solutions

We ensure that all components work together to provide reliable and accurate measurements

## Planning

We design fully integrated weather observation systems from scratch, based on client specifications.

### Site Survey

Our experienced engineers can perform a site survey to ensure that your system performs according to expectations.

## Installation

We are experts in installing and upgrading systems offshore and can solve unexpected challenges with high efficiency.

### Acceptance testing

We carry out acceptance tests to verify whether your system is performing according to project specifications.

## Service / Maintenance

We can carry out annual inspections of weather observation systems of various manufacturers.

### 24/7 support

We are always on duty, ready to offer support on request.

*Our solutions and services include: AWOS – Automated Weather Observing System, Automatic transmission of data (SYNOP/METAR), Helideck monitoring system, Wave radar products – and more.*

## Certified Vaisala Service Partners

We are licensed by Vaisala to execute inspections and maintenance of Vaisala's weather stations and sensors.

Our solutions are designed and tested according to customer specifications and national and international regulations (e.g. CAP437).
